Free Tyres?

May 2009
Newsletter

Did you know, that 8 out of 10 pressure gauges at petrol stations are inaccurate and in general under pressure? This means that your tyres will end up with the outer edges worn first. As well as cracking between the tread area and sidewall. If you notice any of these problems please call in and we will be happy to check your tyres.

Did you know that 70% of all mileage is added to the vehicle in the summertime? A vehicle with 3 mm of tread on the tyre has actually only 1.4 mm of useable tread and this means 3 times greater breaking distance, especially with our climate and our summer showers increasing the possibility of aquaplaning. This is why rear end accidents increase by 15% in the summertime.

We at the

are a Centre of Excellence for Maxxis Tyres the worlds, biggest tyre producer who now make over one million tyres and tubes a day 365 days a year.

As a celebration for the accolade FG Group can offer anyone who buys a Maxxis tyre for any normal road use* a free replacement tyre in the event of a non repairable puncture. We will also offer a FREE balance and valve with your replacement tyre, all you have to do is fill out the Maxxis Guarantee form.
